print notes

1. This instrument is a screening analyzer. disease diagnosis is complex and individual. the result is a reference, and should not be a basis for specific disease diagnosis.
2. If there is H behind result value, it indicates the test parameter is beyond the upper limit of the normal range. If there is L behind result value, it indicates the test parameter is lower than the lower limit of the normal range.
3. If there is > behind result value, it indicates the test parameter result is beyond the upper measuring range limit of the instrument. If there is < behind result value, it indicates the test parameter result is lower than the lower measuring range limit of the instrument.

* The test result is only a reference and screening and not intended for specific diagnosis.

* Abnormal sample: L/P.
